MENISPERMACEAE (MOONSEED FAMILY)

5. BÉRBERIS L. BARBERRY

Sepals 6, roundish, with 2-6 bractlets outside. Petals 6, obovate, concave, with two glandular spots inside above the short claw. Stamens 6. Stigma circular, depressed. Fruit a 1-few-seeded berry. Seeds erect, with a crustaceous integument. — Shrubs, nat. of all continents but Austral., with yellow wood and inner bark, yellow flowers mostly in umbels or racemes, sour berries, and 1-9-foliate leaves. Stamens sensitive, springing forward when the base is touched. (Name

Rhododend. canad.
